### **Research Summary**

Ten years' experience in interdisciplinary research, applying computational methods at the intersection of biology, chemistry, and medicine. My most recent research experience includes the application of deep learning to large-scale molecular data to understand drug bioactivation and toxicity. In the past I have worked with protein structure/complex prediction, modelling protein-protein interactions, molecular dynamics simulations, virtual screening, and sequence analysis. In my current position at CHI, NIH I am building expertise in single cell data analysis on multiple platforms.
